

Philmac – Recycled water fittings & valves

These days, you will find recycled water replacing potable (drinking) water in various applications, such as:

- Irrigation - agriculture, horticulture, sports fields, golf courses and open spaces
- Industrial – a variety of manufacturing processes
- Dual reticulation in residential areas – garden watering, car washing and toilet flushing, as per the illustration depicted in this brochure.

The new AS/NZS 3500 standard stresses that recycled water pipe systems must be clearly identified using the colour purple. Philmac has embraced this concept, and as a leading supplier to the water industry have chosen to manufacture a dedicated range of distinctive purple-coloured compression fittings and valves for recycled water applications.

And, Philmac's recycled water range of products share the same quality characteristics as the rest of its award winning range, including a 20 year warranty.

Philmac Compression Fittings

Philmac's range of Compression Fittings for recycled water provide fast connections, are highly durable and completely reliable. Pressure rated up to PN 16 and approved to AS4129, they are easily and quickly assembled or disassembled. Philmac Compression Fittings are available in a range of configurations including tees, joiners, elbows, male and female connectors, in 20mm to 63mm sizes.

Philmac Isolation Valves

Philmac's range of isolation valves for recycled water are suitable for use above or below ground in irrigation and water distribution lines. Philmac valves have Watermark, AS3855 and are rated to PN 14.
